Point-mixed — primary RF1, c1
Matched repeats r0, r1

Closed-loop c1: 45% read, 45% put, 5% delete, 5% missing_read. Missing-read success is a successful absence result, not a hit. Each operation/outcome remains separate; delete/missing tails have small populations. Points: median of matched per-repeat values; whiskers: observed run min/max, NOT confidence intervals. No pooled quantiles; few repetitions support no confidence claim. Successful latency is conditional on operation/outcome. RF1 does not equalize consistency, durability, security, or transaction semantics. Primary RF1 only: native uses value_wal_barrier and TH explicit caches are off; other cohorts use their stated settings. Warm OS is not guaranteed cache residency. Tail quantiles are descriptive, including small populations.
